## **ABSTRACT**

**The present invention relates to a Plastic Squeeze Tube Squeezer (PSTS) as a tool to squeeze nearly all the contents (paste like materials e.g. tooth paste) packaged in plastic squeeze tubes. It is observed that some paste like material remains in the many pockets and deformities that are created in the normal use of the plastic squeeze tube. The PSTS mounted from the sealed end of the tube when operated upon provide an efficient means to dispense most of the plastic squeeze tube contents approximately 98%.**

**With the established & growing market in USA of packaging paste type materials in plastic squeeze tubes, the PSTS can be a useful tool in managing the waste. The use of PSTS will benefit the consumer.**
